### Fantastic news from the US Food and Drug Administration

**Tofino, BC February 1, 2008** – Creative Salmon received a Notice of Action today from the United States Food and Drug Administration (FDA). The notice states that Creative Salmon fillets *detained* at the US Boarder in December 2007 have been *released*. In other words, their investigation is over and the file is closed.

#### History of events

- December 4<sup>th</sup> 2007, a shipment of fillets belonging to Creative Salmon were subject to routine sampling at the US Boarder by FDA officials.
- December 27<sup>th</sup> the FDA reported that the sample had tested positive for trace levels of Malachite Green. The positive sample contradicted previous and subsequent sampling conducted both by Creative Salmon and the Canadian Government.
- January 15<sup>th</sup> 2008 the FDA informed Creative Salmon that their positive result was *under review* at their laboratory headquarters in Atlanta.
- February 1<sup>st</sup> 2008 the FDA informed Creative Salmon that their *review* did not support *detention* of the fillets and the file had been closed.

We are extremely happy with the news from the FDA and glad to put this unfortunate event behind us. We apologize for any inconvenience this event may have caused our customers suppliers and or staff.
